ABSTRACT

The next century is either going to be spiritual, or it would not exist.

(XX Century)

Anre Moroi

This article is a serious warning that the life on Earth is in danger. After we have depleted the mineral deposits of mother Earth, which took away her ability to rebalance, we have polluted her in all possible ways: with chemicals, with nuclear waste, with antennas emitting electromagnetic fields with all kind of frequencies – radio (for our radio-stations), microwaves (for our digital TV, cellular phones, and internet), etc. Our Mother Earth has been tolerable to our mischiefs for so long, but her tolerance is running out short. Not accepting any more, the harm she suffered, she will stop tolerating our destructive behavior and try to get rid of us – with a global flood (like Noah's Flood), global earthquakes, or a very deadly pandemic. Or following the road of self-destruction, we will self-destroy ourselves by dying from: 1/ the toxic chemicals, or 2/ the nuclear waste with which we polluted the Earth, or 3/ becoming victims of the electromagnetic pollution, which we created. We can survive only if we embrace the fact that we are not only material body. What we see as aura, is our emotional Spirit - it is weak informational nonlinear electromagnetic field (NEMF), which rules and regulates everything in our body, including our immune systems. Since the 5G fast internet has the same frequencies as our aura (Sprit), it can disable our immune system and lead to globally spread Pandemics capable to end the life on Earth.

1. Introduction

In December 1992, a document was published: "World Scientists Warning to Humanity". 1,700 world's leading scientists from 80 countries, including the majority of the Nobel laureates in the sciences, signed the document. The document started like this: "Man's activities on Earth cause big and irreversible damages on Earth's environment and its mineral deposits. Our day-to-day activities are threatening the future of the human society and of animals' and plants' kingdoms. They can change the living world to the degree that it wouldn't be able to sustain its life the way it is. Fundamental changes are necessary, if we want to escape the collisions, to which the present course can lead" (Tihoplav and Tihoplav, 2012). This was 28 years ago.

In November 2017, 25 years after the first warning, a second warning was issued. This time 15,384 scientists from 184

countries signed it. And nothing changed - today we are much farther on the road of self-destruction (Tihoplav and Tihoplav, 2012).

2. Chemical Pollution

We have polluted our environment with many toxic chemicals by dumping them directly into the sewage system without any treatment to reduce their toxicity. An example of this is the case of cyanide and its derivatives used by General Electric for etching of copper and silver metal plates.

It is described in the book of Dr. Timothy Swiss "A Breath of Cyanide" (Swiss, 2020). The author is one of these sensitive individuals, who suffered for years of cyanide poisoning when living in different states in the US – the poisoning is quite global. He also had numerous patients with the same complains. For the sad end of his story see the conclusion.

Also, the toxic chlorine – a side product of the aluminum industry – instead of treatment to reduce its toxicity, which would be very expensive, was sold to the water distributing companies for disinfection of the water and we are all drinking this toxic chlorinated water (Kuman, 2020a). This is still done in the US regardless of the fact that as far back as 50 years ago, Germany had the scientific proof that chlorinated water is harmful. After a hot debate in the press over the harm of chlorinated water, Germany switched to ozonize water. Following the Germans, ORNL (Oak Ridge National Laboratory) did their own research in the US and confirmed the Germans' finding that chlorinated water is harmful – it causes cancer.

However, the US continued to use chlorinated water regardless. I think the different approach in the two countries has something to do with the fact that Germany has social medicine, while the US has private medicine.

Also, each time a rocket is sent into space, 60% of the ozone is destroyed because the rocket fuel contains ingredients that destroy the ozone. This seriously disturbs the atmosphere balance and increases its turbulence activities manifested with more hurricanes (Tihoplav and Tihoplav, 2012).

3. Depleted Mineral Resources

In the XX century alone 150,000 mineral resources seized to exist. According to the Russian geologists Dmitriev (Tihoplav and Tihoplav, 2012), these mineral deposits were the Earth's natural conducting metal wires keeping the electricity on the surface and inside the Earth balanced. When too much electricity was accumulated on the surface of the Earth, the excess was transferred to the Earth depth through these conducting mineral-deposit pathways of the Earth. And vice-versa, when too much energy was accumulated in the depth of the Earth because of geodynamic activity, the excess energy was sent to the surface through these conducting mineral-deposit pathways. Now, without the mineral deposits, such electric balance is impossible... and you will see in section 5 in which way this influences us.

4. The Earth is Just as Alive as We Are

Black Holes of anti-matter created the whole material world and the NEMF that separated the anti-matter from the matter got imprinted on all material creations (Kuman, 2019a). Thus, everything material is a material body and light NEMF. The Earth also has a material body and light NEMF and both the Earth NEMF and our NEMFs have torus shape. Since the weak informational field (NEMF) of our material body is intertwined with the weak informational NEMF of our emotional Spirit, we can communicate through our weak informational NEMF of the Spirit with the weak informational NEMF of our Earth and ask it to provide rain, for example.

Our materialistic society has chosen to believe that we are only material bodies and completely ignore the presence of our Spirit, which is NEMF. This is done regardless of the fact that some people see it as aura. It can also be photographed in high frequency electric field, which multiplies the photons and makes the aura visible to everybody - it is called Kirlian photography. In the same way, we completely ignore the

Earth's weak informational NEMF and attempts to communicate with the Earth are considered stupid. However, this lack of communication cannot continue forever and there is a high price to pay for ignoring the NEMFs of the Earth and ours.

5. Electromagnetic Pollution

Since the Earth NEMF is nonlinear, the Earth has alternating vortices spinning clockwise and anti-vortices spinning counterclockwise (Tihoplav and Tihoplav, 2012), just as we have them in the NEMF of our body, where they are called "chakras", which mean "spinning wheels" in Sanskrit (Kuman, 2019b). We should consider how we influence the Earth chakras each time we pinch an antenna in the Earth because the emitting antenna creates an anti-vortex spinning counterclockwise and emitting energy, which influences the nearby Earth vortices spinning clockwise and sucking energy in. This means that each antenna we pinch in the Earth disturbs the balance of the Earth NEMF. And this is true for all the antennas: radio for our radios and microwave antennas for our digital TV, cellular phones, and internet. We are not only polluting the atmosphere with them; we are polluting the Earth NEMF as well. And we are forcing the NEMF of our bodies to adapt to the numerous changes we have created.

Another bad influence on Earth's NEMF is the fact that the frequency of the alternating currents used in the US is 60 Hz and this is the resonance frequency of the ring currents in the Earth magma. Nobody knows what is the effect of this on Earth and man. Russian scientists found that pathogens manifest themselves in our aura in the mm diapason and our 5G fast internet is in the same mm diapason (Kuman, 2020b). Thus, 5G technologies can be expected to interfere with our immune ability to fight pathogens. Why do we never test how our new technologies would influence our body? We should do this and we should always consider the fact that different people have different sensitivity (Kuman, 2019c) – what is safe for one person could be killing another. We should test every new technology before to use it because our life on Earth depends on this. There is a limit to our ability to adapt and we may all die unable to adapt to the newest technology we have created.

But there is also another kind of price we pay for over-electrifying the Earth atmosphere and the Earth surface – the NEMF of the Earth creates a lot of swirling rings (hurricanes) and swirling columns (tornados) over the ocean. Since the US has the highest production and consumption of electrical energy in the world (seen from a satellite the North American continent glows), such over-electrified continent would have a large electric gradient at the borderline with the ocean. The swirling hurricanes and tornados created over the ocean and having dipole moment would be attracted to the over-electrified continent. This explains why the US have so much hurricanes and tornados. The Earth is kicking us back for over-electrifying its surface after depleting her mineral deposits, which does not allow rebalancing of the surface and internal electrical charges (Kuman, 2019d).

How does this over-electrified North-American continent influence the people living there? The distance between the

Earth surface and the ionosphere used to be 300 km. and the so-called “resonance Shuman frequency” specific for this distance was 8 Hz. This was the frequency to which all our brains were tuned – it was called alpha rhythm and it was the rhythm of calm relaxed brain. Now the over-electrified North American continent has pulled the ionosphere at a distance 100 km. The so-called “resonance Shuman frequency” specific for 100 km distance is 13 Hz, which is called beta rhythm and is rhythm of tension, doubts, fear, and anxiety (Tihoplav and Tihoplav, 2012). Maybe this can explain the increased number of shootings; at schools, on the streets, and in churches. Our NEMF rules the response of our immune system and since our newest 5G technologies have the same frequency as our NEMF, the 5G technologies are expected to lower our immune ability to fight viruses (Kuman, 2019b) and this endangers our life on Earth.

6. Radioactive Pollution of the Earth and Space around It

I attended a “Physics and Energy” Conference in Bucharest in 1975. Victor Weitskopf - the Nobel Prize winner for the chain nuclear reaction, which opened the door to the use of nuclear energy - announced at the conference that we should not use nuclear energy unless we have solved the problem of safe disposal of the nuclear waste products. He is right, but nobody paid attention to what he said. Just in Oak Ridge, where the first atomic bombs were created, so much nuclear pollution was dumped as nuclear waste that even 100 years will not be enough to clear the nuclear mess. The created in Oak Ridge bombs were dropped over Hiroshima and Nagasaki to end World War II.

Also, polluting the Earth with nuclear waste was not enough; we are ready to pollute the space around the Earth. 30 nuclear-powered spacecrafts are still in orbit ready to pollute with nuclear debris in case of meteorite damage or other disaster. Also, when we do underground nuclear-bomb testing, we are pumping energy to the Earth and the Earth is kicking us back with destructive earthquakes and tsunamis. The humans on Earth are like our intestinal parasites, when they become very nasty, we are doing something to get rid of them. So it is with the Earth, when we become very nasty, the Earth will do something to get rid of us. This is going to happen soon, if we don't change the collision course we follow now. It already happened once – the Noah's Flood ended the existence of Atlantis.

7. Conclusion

We are on the road of self-destruction and we are living in denial. We have mistreated the Earth in all possible ways. We have polluted the Earth with many different toxic chemicals. However, when Dr. Timothy Oesch (this is his real name, Timothy Swiss is his pen-name) tried to blow the whistle about the cyanide poisoning of our Earth instead of doing something to stop the farther poisoning of the Earth

and stop the poisoning of the people living on the Earth, he was pronounced mentally sick - diagnosed with paranoia and he lost his job. This injustice was done to him so that nobody else would dare to blow the whistle. Nobody wanted to look at the facts - he provided evidence from different laboratories that he and his patients had cyanides in their blood and urine. The response in all 3 states – Texas, Philadelphia, and Tennessee – was the same – they gave him a certificate that he is mentally sick (diagnosis paranoia) and fired him. We are on the road of self-destruction and we are living in denial.

We consider nuclear radiation to be harmful for the body and we have regulations, but the “safe” doses in the US are way over what is considered “safe” dose according to European standards. We continue to build nuclear reactors regardless that we have not solve the problem of safe disposal of the nuclear waste and we continue to pollute the Earth with nuclear waste. We also pollute the space around the Earth - 30 nuclear-powered spacecrafts are orbiting the Earth ready to pollute with nuclear debris in case of meteorite damage or other disaster.

We are on the road of self-destruction because we completely deny the fact that the electromagnetic pollution of the Earth (especially 5G technologies) can be harmful for the human body. This is ridiculous considering the fact that our weak informational NEMF, seen as aura, which rules and regulates everything in the body including our immune system is sensitive in the mm diapason of the 5G technologies. This is a wide-open door for Pandemics as the present one. We urgently need regulations for electromagnetic pollution and we need to stop polluting the Earth electromagnetically. We need to do this, if we want to survive this Pandemic and the oncoming ones.
